100 Points

4 Bowls 100 Points or 100 points plus Handicap difference

Scoring Method: nearest Bowl to Jack				4 Points (and takes Jack)
2nd	"	"	"	3 "
3rd	"	"	"	2 "
4th	"	"	"	1 Point

If both competitors reach or exceed their target score (100 points or 100 points plus 5 x handicap difference) during the same end, the result must be resolved in accordance with the following procedure:

The winner is the one with the larger ratio of Final Score to Target Score.

$$\frac{\text{Final Score}}{\text{Target Score}} = \text{Ratio (after the final end)}$$

For Example:

	Competitor A	Competitor B	Winner
(i)	$\frac{103}{100} = 1.03$	$\frac{127}{125} = 1.016$	A
(ii)	$\frac{102}{100} = 1.02$	$\frac{128}{125} = 1.024$	B

In the event of an absolute tie, whereby both competitors reach the exact target score after completion of the normal final end, an extra end shall be played and the result calculated as shown above.

We plan to include details of the 2010 draw and results when they become available.
